

PROJECT MANAGEMENT

System Analysis & Design
Course
Sharif University of
Technology

PROJECTS AND PROJECT MANAGERS

Project – a [temporary] sequence of unique, complex, and connected activities having one goal or purpose and that must be completed by specific time, within budget, and according to specification.

Project manager - the person responsible for supervising a systems project from initiation to conclusion

PROJECT MANAGEMENT AND PROCESS MANAGEMENT

Project management – the process of scoping, planning, staffing, organizing, directing, and controlling the development of an acceptable system at a minimum cost within a specified time frame.

Process management – the activity of documenting, managing, and continually improving the process of systems development.

MEASURES OF PROJECT SUCCESS

- The resulting information system is acceptable to the customer.
- The system was delivered “on time.”
- The system was delivered “within budget.”
- The system development process had a minimal impact on ongoing business operations.

CAUSES OF PROJECT FAILURE

Failure to establish upper-management commitment to the project

Lack of organization's commitment to the methodology

Taking shortcuts through or around the methodology

Poor expectations management

- **Feature creep**— uncontrolled addition of technical features to a system.
- **Scope creep** — unexpected and gradual growth of requirements during an information systems project.

CAUSES OF PROJECT FAILURE (CONT.)

Premature commitment to a fixed budget and schedule

Poor estimating techniques

Overoptimism

Inadequate people management skills

Failure to adapt to business change

Insufficient resources

Failure to “manage to the plan”

PROJECT MANAGER COMPETENCIES

Business awareness

Business partner orientation

Commitment to quality

Initiative

Information gathering

Analytical thinking

Conceptual thinking

Interpersonal awareness

Organizational awareness

Anticipation of impact

Resourceful use of influence

Motivating others

Communication skills

Developing others

Monitoring and controlling

Self-confidence

Stress management

Concern for credibility

Flexibility

PROJECT MANAGEMENT FUNCTIONS

Scoping – setting the boundaries of the project

Planning – identifying the tasks required to complete the project

Estimating – identifying the resources required to complete the project

Scheduling – developing the plan to complete the project

Organizing – making sure members understand their roles and responsibilities

Directing – coordinating the project

Controlling – monitoring progress

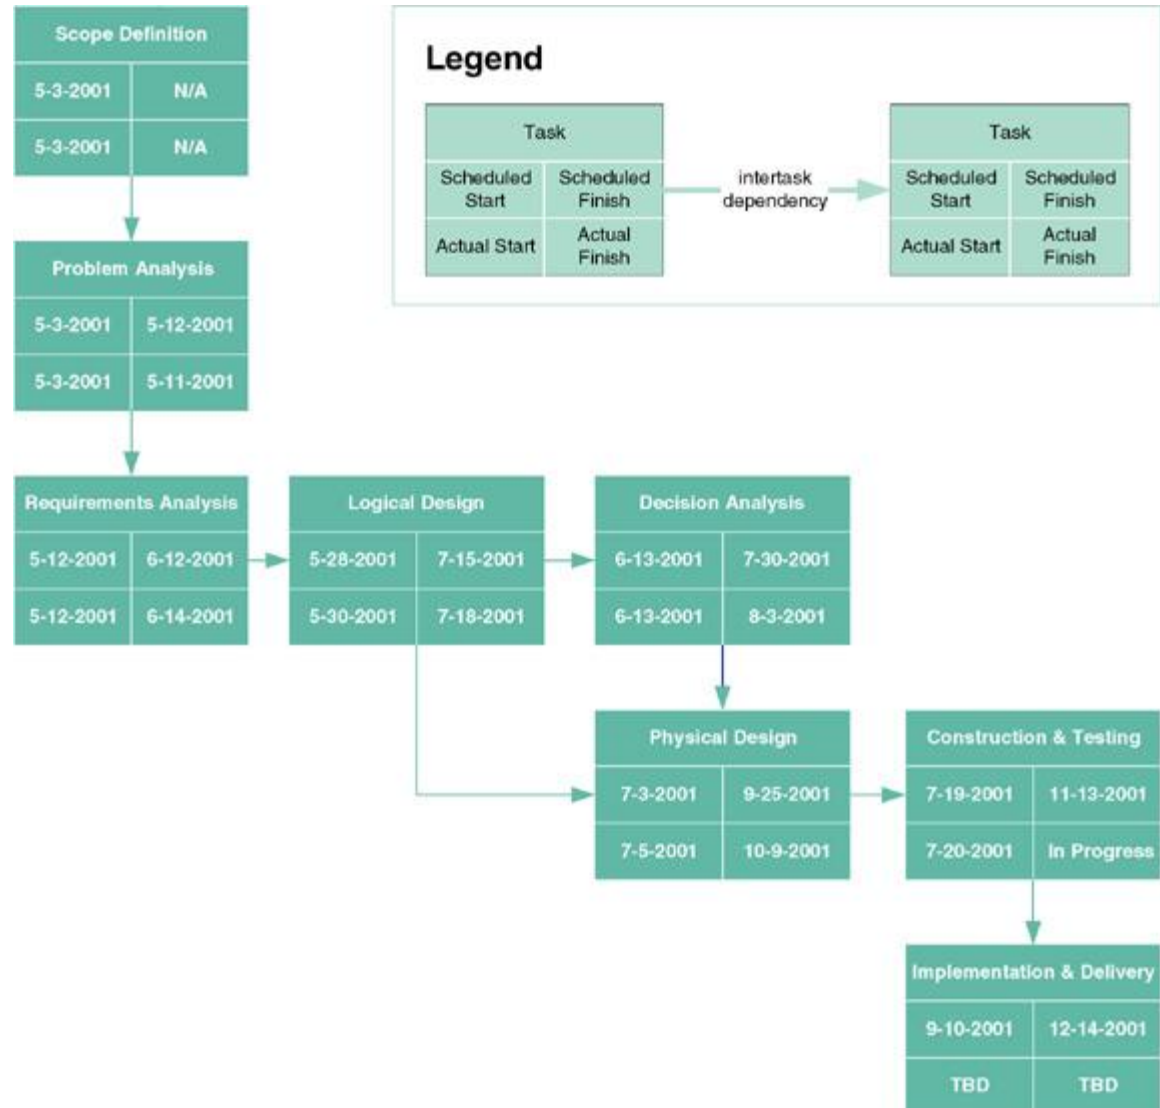

Closing – assessing success and failure

PROJECT MANAGEMENT TOOLS & TECHNIQUES

PERT chart – a graphical network model used to depict the interdependencies between a project's tasks.

Gantt chart – a bar chart used to depict project tasks against a calendar.

JOINT PROJECT PLANNING STRATEGY

Joint project planning (JPP) – a strategy in which all stakeholders attend an intensive workshop aimed at reaching consensus on project decisions.

ACTIVITY 1 – NEGOTIATE SCOPE

Scope – the boundaries of a project – the areas of a business that a project may (or may not) address. Includes answers to five basic questions:

- **Product**
- **Quality**
- **Time**
- **Cost**
- **Resources**

Statement of work – a narrative description of the work to be performed as part of a project.

Common synonyms include *scope statement*, *project definition*, *project overview*, and *document of understanding*.

STATEMENT OF WORK

Purpose

Background

- Problem, opportunity, or directive statement
- History leading to project request
- Project goal and objectives
- Product description

Scope

- Stakeholders
- Data
- Processes
- Locations

STATEMENT OF WORK

Project Approach

- Route
- Deliverables

Managerial Approach

- Team building considerations
- Manager and experience
- Training requirements
- Meeting schedules
- Reporting methods and frequency
- Conflict management
- Scope management

STATEMENT OF WORK

Ballpark Estimates

- Schedule
- Budget

Conditions of Satisfaction

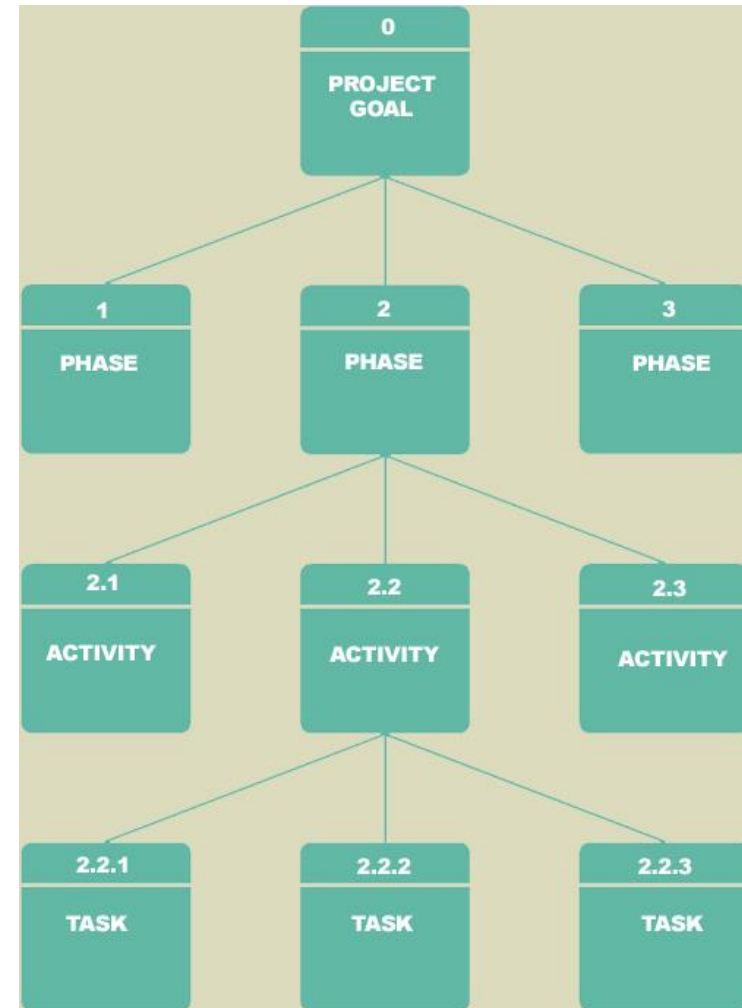

- Success criteria
- Assumptions
- Risks

Appendices

ACTIVITY 2 – IDENTIFY TASKS

Work breakdown structure (WBS) – a graphical tool used to depict the hierarchical decomposition of the project into phases, activities, and tasks.

Milestone – an event signifying the completion of a major project deliverable.

ACTIVITY 3 — ESTIMATE TASK DURATIONS

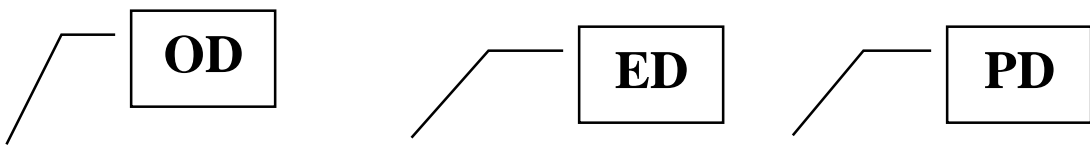

Elapsed time takes into consideration:

- **Efficiency** - no worker performs at 100% efficiency
 - Coffee breaks, lunch, e-mail, etc.
 - Estimate of 75% is common
- **Interruptions**
 - Phone calls, visitors, etc.
 - 10-50%

ACTIVITY 3 – ESTIMATE TASK DURATIONS

1. Estimate the minimum amount of time it would take to perform the task – the **optimistic duration** (OD).
2. Estimate the maximum amount of time it would take to perform the task – the **pessimistic duration** (PD).
3. Estimate the **expected duration** (ED) that will be needed to perform the task.
4. Calculate a weighted average of the **most likely duration** (D) as follows:

$$D = \frac{(1 \times OD) + (4 \times ED) + (1 \times PD)}{6}$$

$$3.33 \text{ days} = \frac{(1 \times 2 \text{ days}) + (4 \times 3 \text{ days}) + (1 \times 6 \text{ days})}{6}$$

ACTIVITY 4 — SPECIFY INTERTASK DEPENDENCIES

Finish-to-start (FS)—The finish of one task triggers the start of another task.

Start-to-start (SS)—The start of one task triggers the start of another task.

Finish-to-finish (FF)—Two tasks must finish at the same time.

Start-to-finish (SF)—The start of one task signifies the finish of another task.

ENTERING INTERTASK DEPENDENCIES

The screenshot displays the Microsoft Project interface for a project named "SoundStage Member Services Project". The main window shows a Gantt chart with tasks and their dependencies. A "Task Information" dialog box is open, showing the "Predecessors" tab. The dialog box contains the following information:

- Name:** Present the project and plan
- Duration:** 2d
- Estimated:** ☐
- Predecessors:**

| ID | Task Name | Type | Lag |
|----|------------------|----------------------|-----|
| 4 | Plan the project | Finish-to-Start (FS) | 0d |

The Gantt chart shows the following tasks and their dependencies:

- Task 1: 1 Scope Definition (1 day)
- Task 2: 1.1 List problems, opportunities, and directives (1 day)
- Task 3: 1.2 Negotiate scope (1 day)
- Task 4: 1.3 Plan the project (1 day)
- Task 5: 1.4 Present the project and plan (2 days)
- Task 6: 1.5 Project charter completed (1 day)
- Task 7: 2 Problem Analysis (1 day)
- Task 8: 2.1 Analyze the current system (6FS+4 days)
- Task 9: 2.2 Establish (1 day)
- Task 10: 2.3 Update (1 day)
- Task 11: 2.4 Present (1 day)
- Task 12: 2.5 Problem (1 day)
- Task 13: 3 Requirement (1 day)
- Task 14: 3.1 Identify (1 day)
- Task 15: 3.2 Analyze (1 day)
- Task 16: 3.3 Prioritize (1 day)
- Task 17: 3.4 Update (1 day)
- Task 18: 3.5 Requirement (1 day)
- Task 19: 4 Decision Analysis (1 day)
- Task 20: 4.1 Identify (1 day)
- Task 21: 4.2 Analyze (1 day)
- Task 22: 4.3 Recommend (1 day)
- Task 23: 4.4 Recommend (1 day)
- Task 24: 4.5 System (1 day)
- Task 25: 5 Physical Design (1 day)
- Task 26: 5.1 Design (1 day)
- Task 27: 5.2 Design (1 day)

The Gantt chart also shows the following dependencies:

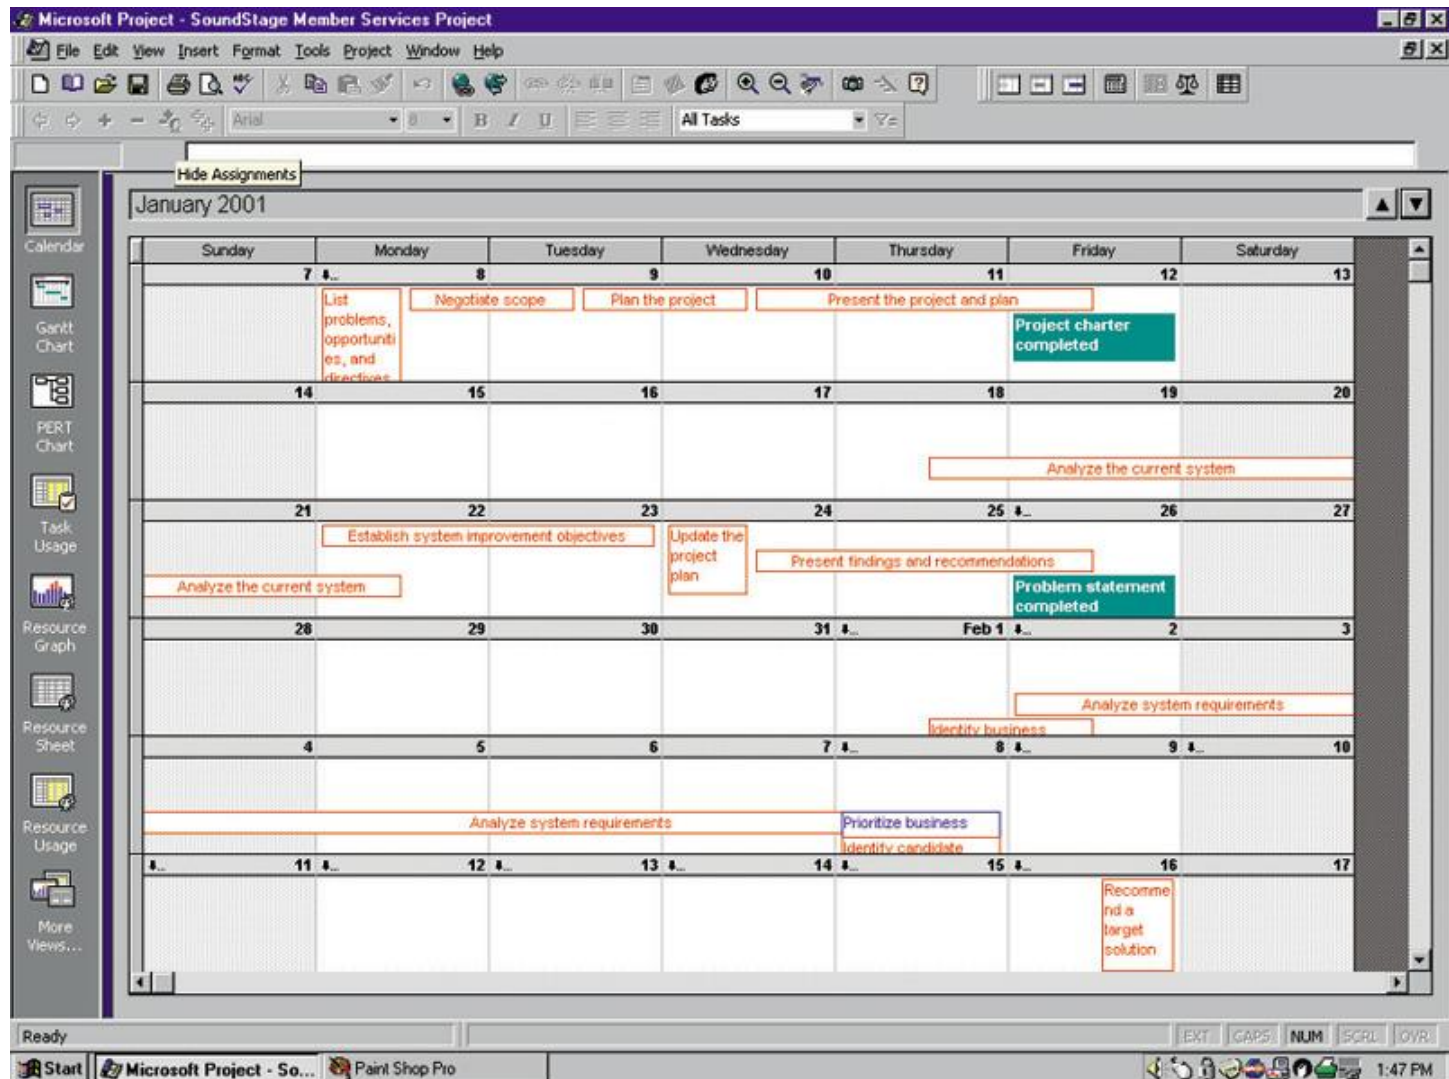

- Task 1 is the predecessor for Task 2.
- Task 2 is the predecessor for Task 3.
- Task 3 is the predecessor for Task 4.
- Task 4 is the predecessor for Task 5.
- Task 5 is the predecessor for Task 6.
- Task 6 is the predecessor for Task 7.
- Task 7 is the predecessor for Task 8.
- Task 8 is the predecessor for Task 9.
- Task 9 is the predecessor for Task 10.
- Task 10 is the predecessor for Task 11.
- Task 11 is the predecessor for Task 12.
- Task 12 is the predecessor for Task 13.
- Task 13 is the predecessor for Task 14.
- Task 14 is the predecessor for Task 15.
- Task 15 is the predecessor for Task 16.
- Task 16 is the predecessor for Task 17.
- Task 17 is the predecessor for Task 18.
- Task 18 is the predecessor for Task 19.
- Task 19 is the predecessor for Task 20.
- Task 20 is the predecessor for Task 21.
- Task 21 is the predecessor for Task 22.
- Task 22 is the predecessor for Task 23.
- Task 23 is the predecessor for Task 24.
- Task 24 is the predecessor for Task 25.
- Task 25 is the predecessor for Task 26.
- Task 26 is the predecessor for Task 27.

SCHEDULING STRATEGIES

Forward scheduling – a project scheduling approach that establishes a project start date and then schedules forward from that date.

Reverse scheduling – a project scheduling strategy that establishes a project deadline and then schedules backward from that date.

A PROJECT SCHEDULE IN CALENDAR VIEW

ACTIVITY 5 — ASSIGN RESOURCES

People — includes all system owners, users, analysts, designers, builders, external agents, and clerical help involved in the project in any way.

Services — includes services such as a quality review that may be charged on a per use basis.

Facilities and equipment — includes all rooms and technology that will be needed to complete the project.

Supplies and materials — everything from pencils, paper, notebooks to toner cartridges, and so on.

Money — includes a translation of all of the above into budgeted dollars!

DEFINING PROJECT RESOURCES

Microsoft Project - SoundStage Member Services Project

ASSIGNING PROJECT RESOURCES

The screenshot displays the Microsoft Project interface for a project named "SoundStage Member Services Project". The main view is a Gantt chart showing task dependencies and durations. A task list on the left includes tasks such as "2.1 Analyze the current system", "3 Requirements Analysis", "4 Decision Analysis", and "5 Design".

The "Task Information" dialog box is open, showing the "Resources" tab. The task selected is "Analyze system requirements" with a duration of 5 days. The resources assigned are listed in the following table:

| Resource Name | Units |
|---------------------------|-------|
| Business Analyst | 20% |
| JAD Facilitator | 30% |
| Management Representative | 100% |
| User Representative(s) | 100% |
| Data Analyst | 20% |
| Process Analyst | 20% |

The task list on the left shows the following tasks and their predecessors:

| ID | Name | Predecessors |
|----|---|---------------|
| 8 | 2.1 Analyze the current system | 6FS+4 days |
| 9 | 2.2 Establish system improvement objectives | 8FS-0.5 days |
| 10 | 2.3 Update the project plan | 9 |
| 11 | 2.4 Present findings and recommendations | 10 |
| 12 | 2.5 Problem statement completed | 11 |
| 13 | 3 Requirements Analysis | |
| 14 | 3.1 Identify business requirements | 9,12FS+4 days |
| 15 | 3.2 Analyze system requirements | 14FS-0.5 days |
| 16 | 3.3 Prioritize business requirements | 15FF |
| 17 | 3.4 Update the project plan | 16 |
| 18 | 3.5 Requirements statement completed | 17 |
| 19 | 4 Decision Analysis | |
| 20 | 4.1 Identify candidate solutions | |
| 21 | 4.2 Analyze candidate solutions | |
| 22 | 4.3 Recommend a target solution | |
| 23 | 4.4 Recommend a project solution | |
| 24 | 4.5 System recommendation completed | |
| 25 | 5 Design | |
| 26 | 5.1 Design the application architect | |
| 27 | 5.2 Design the system database | |
| 28 | 5.3 Design the system interface | |
| 29 | 5.4 Design the application logic | |
| 30 | 5.5 Update the project plan | |

ASSIGNING PEOPLE TO TASKS

Recruit talented, highly motivated people

Select the best task for each person

Promote team harmony

Plan for the future

Keep the team size small

RESOURCE LEVELING

Resource leveling – a strategy for correcting resource over-allocations.

Two techniques for resource leveling:

task delaying

task splitting

TASK DELAYING

TASK SPLITTING

Critical path – the sequence of dependent tasks that determines the earliest possible completion date of the project.

- Tasks on the critical path cannot be delayed without delaying the entire project. Critical tasks can only be split.

Slack time – the amount of delay that can be tolerated between the starting time and completion time of a task without causing a delay in the completion date of the entire project.

- Tasks that have slack time can be delayed to achieve resource leveling

ACTIVITY 6 — DIRECT THE TEAM EFFORT

Supervision resources

- The Deadline: A Novel about Project Management
- The People Side of Systems

Stages of Team Maturity

(see figure to the right)

10 HINTS FOR PROJECT LEADERSHIP

1. Be Consistent.
2. Provide Support.
3. Don't Make Promises You Can't Keep.
4. Praise in Public; Criticize in Private.
5. Be Aware of Morale Danger Points.
6. Set Realistic Deadlines.
7. Set Perceivable Targets.
8. Explain and Show, Rather Than Do.
9. Don't Rely on Just Status Reports.
10. Encourage a Good Team Spirit.

ACTIVITY 7 — MONITOR AND CONTROL PROGRESS

Progress reporting

Change management

Expectations management

Schedule adjustments—critical path
analysis (CPA)

PROGRESS REPORT

Cover Page

- Project name or identification
- Project manager
- Date of report

Summary of Progress

- Schedule analysis
- Budget analysis
- Scope analysis(*changes that may have an impact on future progress*)
- Process analysis (*problems encountered with strategy or methodology*)
- Gantt progress chart(s)

Activity Analysis

- Tasks completed since last report
- Current tasks and deliverables
- Short term future tasks and deliverables

PROGRESS REPORT

Previous Problems and Issues

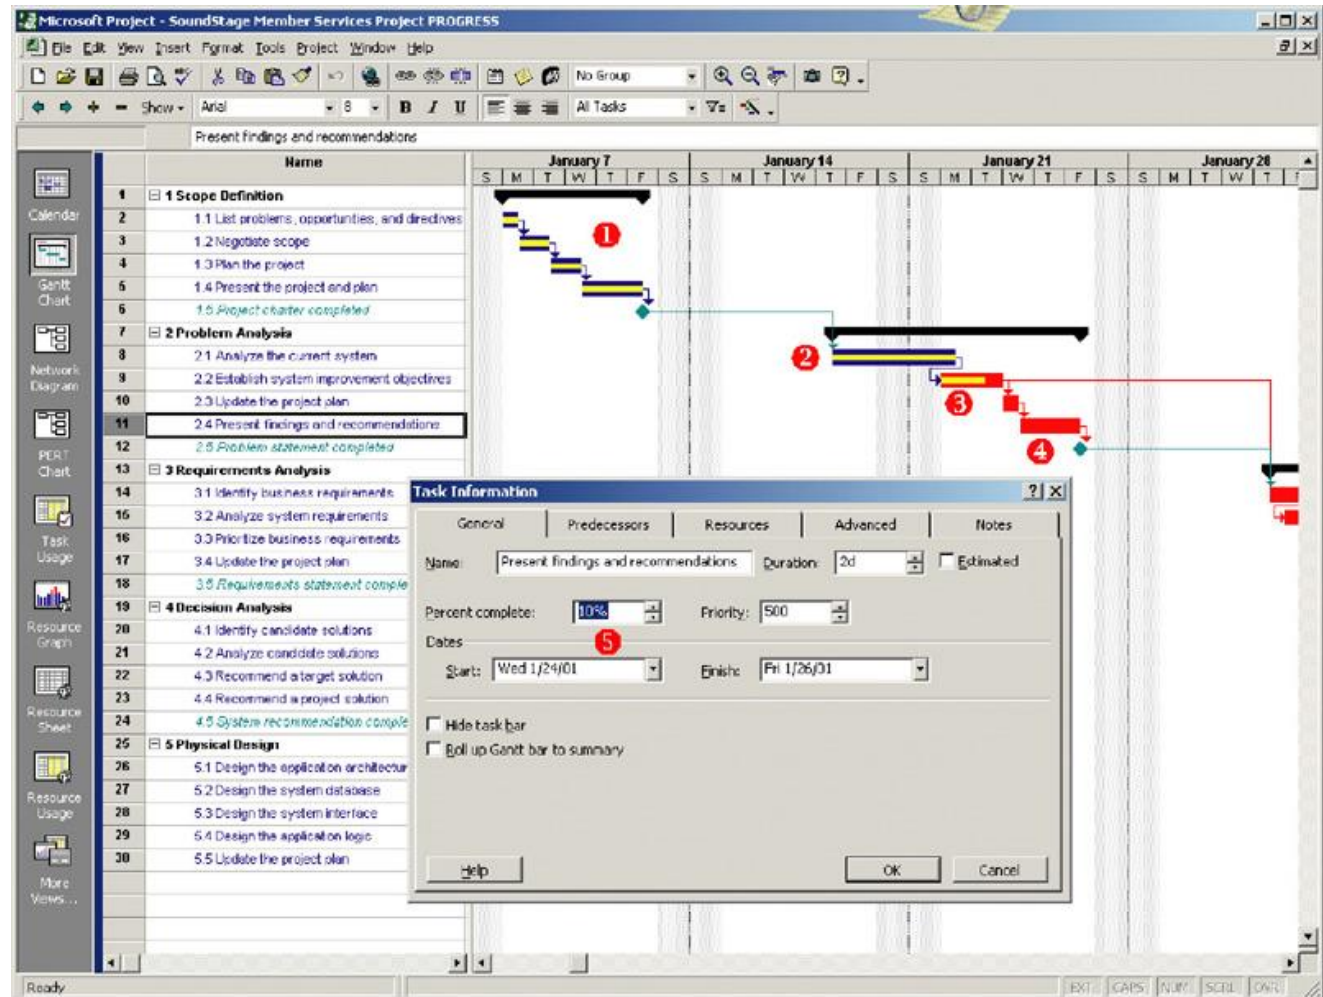

- Action item and status
- New or revised action items
- Recommendation
- Assignment of responsibility
- Deadlines

New Problems and Issues

- Problems (actual or anticipated)
- Issues (actual or anticipated)
- Possible solutions
- Recommendation
- Assignment of responsibility
- Deadlines

Attachments

PROGRESS REPORTING ON A GANTT CHART

CHANGE MANAGEMENT

Change management – a formal strategy in which a process is established to facilitate changes that occur during a project.

Changes can be the result of various events and factors including:

- An omission in defining initial scope
- A misunderstanding of the initial scope
- An external event such as government regulations that create new requirements
- Organizational changes
- Availability of better technology
- Shifts in planned technology that force changes to the business organization, culture, and/or processes
- Management's desire to have the system do more
- Reduced funding for project or imposition of an earlier deadline.

EXPECTATIONS MANAGEMENT

Expectations management matrix – a tool used to understand the dynamics and impact of changing the parameters of a project.

| PRIORITIES → ↓ MEASURES OF SUCCESS | Max or Min | Constrain | Accept |
|---------------------------------------|------------|-----------|--------|
| Cost | | | |
| Schedule | | | |
| Scope and/or Quality | | | |

The most important

The second most important

The least important

Can have only one X in each row and each column

LUNAR PROJECT EXPECTATIONS MANAGEMENT

| PRIORITIES → | Max or Min | Constrain | Accept |
|--|------------|-----------|----------|
| ↓MEASURES OF SUCCESS | | | |
| Cost <ul style="list-style-type: none"> \$20 billion (estimated) | | | X |
| Schedule <ul style="list-style-type: none"> Dec 31, 1969 (deadline) | | X | |
| Scope and/or Quality <ul style="list-style-type: none"> Land a man on the moon Get him back safely | X | | |

TYPICAL, INITIAL EXPECTATIONS FOR A PROJECT

| PRIORITIES → ↓MEASURES OF SUCCESS | Max or Min | Constrain | Accept |
|--------------------------------------|------------|-----------|----------|
| Cost | | X | |
| Schedule | | | X |
| Scope and/or Quality | X | | |

ADJUSTING EXPECTATIONS

| PRIORITIES → | Max or Min | Constrain | Accept |
|--|---|------------------------------|------------------------------|
| ↓ MEASURES OF SUCCESS | | | |
| Cost <ul style="list-style-type: none"> Adjusted budget | | X+ Increase budget | |
| Schedule <ul style="list-style-type: none"> Adjusted deadline | | | X- Extend deadline |
| Scope and/or Quality <ul style="list-style-type: none"> Adjusted scope | X+ Accept expanded requirements | | |

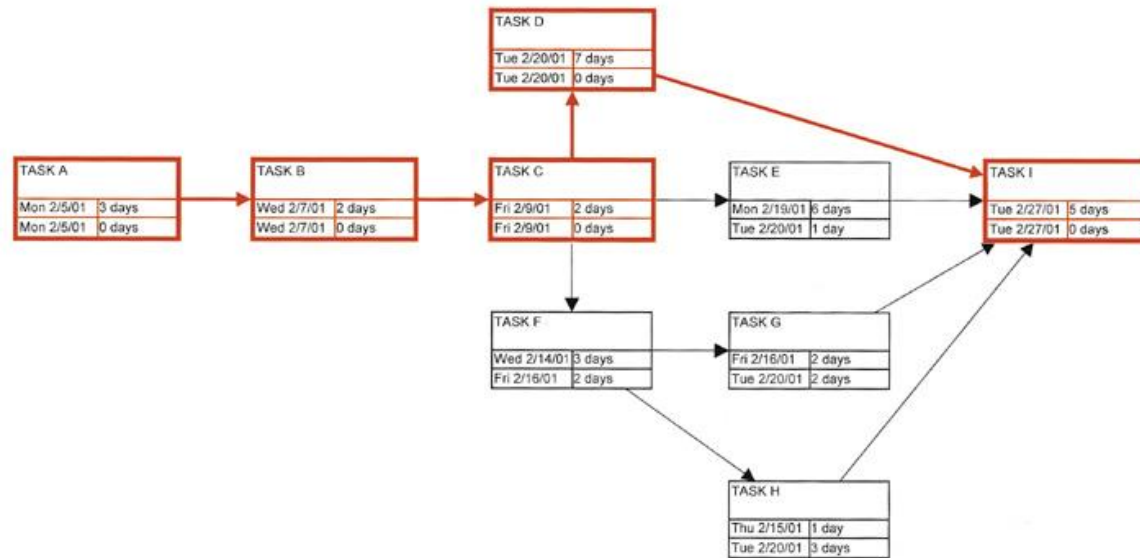

CHANGING PRIORITIES

| PRIORITIES → ↓MEASURES OF SUCCESS | Max or Min | Constrain | Accept |
|--------------------------------------|--------------------------|-----------|----------|
| Cost | X ← Step 1 | X | |
| Schedule | | | X |
| Scope and/or Quality | X → Step 2 | X | |

SCHEDULE ADJUSTMENTS-CRITICAL PATH ANALYSIS

1. Using intertask dependencies, determine every possible path through the project.
2. For each path, sum the durations of all tasks in the path.
3. The path with the longest total duration is the **critical path**.
 - The **critical path** is the sequence of tasks with the largest sum of *most likely durations*. The critical path determines the earliest completion date of the project.
 - The **slack time** for any non-critical task is the amount of delay that can be tolerated between starting and completion time of a task without causing a delay in the entire project.

CRITICAL PATH ANALYSIS

| | | | | | |
|--------------|-------------|-----------------------|---------------------|------------------------|--------------------|
| Name | Critical | Critical Milestone | Critical Summary | Critical Subproject | Critical Marked |
| Early Finish | Noncritical | Noncritical Milestone | Noncritical Summary | Noncritical Subproject | Noncritical Marked |
| Late Finish | | | | | |
| Total Slack | | | | | |

ACTIVITY 8 — ASSESS PROJECT RESULTS AND EXPERIENCES

Did the final product meet or exceed user expectations?

- Why or why not?

Did the project come in on schedule?

- Why or why not?

Did the project come in under budget?

- Why or why not?
